

# Project 3

## *Group 8*

Kate Sharp

Alec Howard

Sam Lipscomb

## *Commands:*

- Main Website:

```
group8@secomproject:~/project_website$ python class_website.py
```

```
Navigate to: https://10.10.1.13:8895
```

- Token vault:

```
group8@secomproject:~/project_website$ python tokenvault_start.py
```

```
Navigate to: http://10.10.1.13:9137
```

- Issuer:

```
group8@secomproject:~/project_website$ cd issuer/  
group8@secomproject:~/project_website/issuer$ python issuer.py
```

```
Navigate to: http://10.10.1.13:9138
```

## *Code Comments:*

- We believe we implemented almost everything in the instructions, however we have some weird bugs related to the confirm page that hasn't been worked out
- When trying to submit the CVV of the confirm page, the program doesn't have a token so it errors when trying to assign it to a values list
- The database holds a token, so we are not sure why it doesn't pull that information correctly

***Project Comments:***

Kate

- Project 1 and 2 were fine, I didn't have any qualms
- Project 3 is fun and I really wish I had more time/less senioritis to work on it
- The videos were well done and helpful when I got stuck
- My only issue with project 3 was that if you didn't implement project 2 entirely correctly it threw off the next part. We had some funky cookie stuff that worked for project 2 but when project 3 rolled around it started breaking stuff

Alec

- I thought they were really fun

Sam

- Nothing to add
